Abstract (en)
[origin: EP0286574A1] 1. Box lock with a tongue of adjustable dimension, in which the particular dimension of the tongue is determined by the disposition of the drive element (2) moved by the cylinder or knob in or on an insert plate (3), characterised in that the insert plate (3) has two recesses (6) arranged in mirror symmetry with respect to the plane of symmetry (7) of the lock, for receiving the drive element (2), and is capable of being rotated through 180 degrees and fixed on the lock cover (4), the two fixing points (5) of the lock cover (4) being arranged relative to the recesses (6) in such a way that, in plan view of the lock, the centre (9) of the line (8) connecting the two fixing points (5) is located on the line of symmetry (7) of the recesses (6), at a spacing (x) from the point of intersection of the centre line (10) of the recesses (6) with the line of symmetry (7), which is half the size of the desired change in dimension of the tongue.
