Abstract (en)
[origin: EP0286622A2] For fastening drainage bags 8 belonging to drainage systems, a device 1 is proposed, which has a grip part 2 and two or four magnets 4 secured on the grip part 2 via holding arrangements 3. In order to adjust the magnets 4 to irregularities in the surface of the article 9 on which the drainage bag 8 is to be fastened, the magnets 4 are arranged movable relative to one another, which is achieved, for example, by means of an elastic connection between the magnets 4 and the grip part 2. In the use position of the device 1 according to the invention, a drainage line 11 leading to the drainage bag 8 is, in its area of transition to the drainage bag 8, supported laterally by the grip part 2. <IMAGE>
