Abstract (en)
[origin: WO8802277A1] A pipette allowing quick variation of the dosing volume comprises a casing (1) in which a movable piston (5) with the rod (6) is mounted. An adjusting bushing (8) connected to a device for visual reading of the dose value serves for presetting the length of piston travel and thus for presetting the dose volume. The position of the bushing (8) is set by means of a regulating nut (11) and where the nut (11) is disengaged from the bushing (8) - by means of a knob (7) fixed at the upper end of the rod.
