Abstract (en)
[origin: EP0286775A1] 1. Expansion joint profile made from an elastic material for sealing a joint between two structural parts, with an upper, through central portion (1), whose surface in the fitted state forms a covering surface located on the level of the surface of the structural parts, as well as with two side legs (2, 3) fitted to the longitudinal ends of the central portion (1), the engaging faces of the structural parts being constructed so as to adapt to the lateral faces of the profile legs (2, 3), characterized in that the central portion is constructed as a cover strip (1) springing out under load and a thickened part (6, 8; 7, 9) is fitted to each side leg (2, 3) and on said thickened part is formed an upper supporting surface (4) for engaging a portion of the underside (1') of the cover strip (1).
