Abstract (en)

[origin: US4867385A] A method and apparatus is disclosed for threading an advancing yarn onto a rotating empty bobbin tube. The yarn is withdrawn by a yarn withdrawal means, while being guided into contact with the periphery of the rotating bobbin tube which is moving in the same direction as the advancing yarn, and which has a surface speed about the same as the yarn advancing speed. The speed of the yarn is then reduced at a location between the empty bobbin and the yarn withdrawal means, such as by contacting the yarn with a braking guide, to cause the yarn to slacken and thus form a lap on the empty bobbin, and to thereby cause the yarn to be caught by and then wound upon the rotating empty bobbin tube.

Abstract (de)

Ein Faden (6), der mit konstanter Geschwindigkeit angeliefert wird, wird zunächst in Umfangskontakt mit der Spulhülse (7) gebracht. Dabei hat die Spulhülse im Bereich des Umfangskontaktes dieselbe Bewegungsrichtung wie der Faden. Sodann wird die Fadenspannung des Fadens zwischen der Spulhülse (7) und der Abzugeinrichtung, z.B. Saugpistole (26) stark vermindert. Dadurch legen sich Teile des Fadens über den Umfang der Spulhülse, so daß sie von dem anlaufenden Faden überwickelt werden.
