Abstract (en)
[origin: EP0286957A1] The supporting structures of a vegetation-sustaining noise barrier are in each case constructed as a single- or multi-piece plate (1), the plates (1) having oblique T-shaped slotted perforations (8) corresponding to the position of the longitudinal boards (2) which are arranged in the manner of a Venetian blind, and the longitudinal boards (2) are provided at a distance from their respective ends (10) with cross-sectional regions (12) which taper with respect to the end cross-sections; the ends (10) of each longitudinal board (2) are pushed through the corresponding slotted perforations (8) of two adjacent plates and suspended therein. The plates (1) as well as the longitudinal boards (2) consist of plastic. <IMAGE>
