Abstract (en)
The present invention relates to a watercraft comprising a submersible frame (1) at the ends of which there are coupled floating elements (10, 11). The frame is provided, at its front portion, with gripping means (15) to be gripped by the user and, at its central portion, with a saddle (20), arranged at a lower level than the mentioned floating elements (10, 11) in order to hold the watercraft center of gravity under the water surface. Propelling devices (30, 31, 40, 41) are moreover provided for propelling the watercraft.
