Abstract (en)
[origin: EP0288060A2] The door wing comprises a frame having a strip which runs parallel to the plane of the frame and protrudes into the space enclosed by the frame, and a wood panel or the like having at least one sheet metal cover which extends over the width of the panel and is of smaller height than the wood panel or the like, is screwed with the latter, is arranged with its free edge, which faces away from the wood panel, at a distance from the adjacent horizontal profiled rod and from its strip and is connected in the region of its free edge with at least one holder which is pushed onto the strip of the profiled rod which is adjacent to the free edge of the sheet metal cover. For the purpose of as simple a production as possible, the holder is provided with clamping tabs which project off both sides parallel to the course of the free edge of the sheet metal cover and which are surrounded in a clamping manner by edge regions of the free edge of the sheet metal cover.
