Abstract (en)

[origin: EP0288437A2] The apparatus comprises a smooth and flat support (1) which can be inclined and is held by an underframe (8, 11). The upper edge of the flat support is covered with an elastically compressible part (14) having a surface with a high coefficient of friction. The apparatus permits a relaxation and a dorsal extension by gravitation in a position, with the legs bent, which is particularly favourable. <IMAGE>
