Abstract (en)

[origin: EP0288800A2] An automatic composer comprises an input device (I1, I3) which inputs part of a music piece and information on the progression of music such as a chord progression, an analyzer (F1) which extracts parameters characterizing the part of the music piece and an melody generator (F3) which develops the whole music piece using the characteristic parameters and the chord progression. Therefore, the characteristics of the part of the music piece may be present everywhere in the music piece to a desired extent. The balance between consistency and variety in music is well controlled.
