Abstract (en)

[origin: EP0288883A2] In a container closure cap (1) for spray cans or similar containers (2), a lever opening (11) is provided in the cap edge (13) adjoining the cap opening in the form of a gap for the insertion of a screwdriver or the like to prise off the closure cap (1) from the closure position, the lever opening (11) being bounded in the insertion direction of the screwdriver in the interior by a stop covering (10) which adjoins the outside of the container (2) in the associated region and against which the screwdriver must inevitably be pressed during insertion so that, by this means, the container (2) cannot come into direct contact with the opening tool. <IMAGE>
