Abstract (en)
[origin: EP0288996A2] A display incorporating a frame adapted to retain removably a square mounting panel of stiff material, which in turn provides mounting means for mounting a rectangular display card or sheet, with its edges parallel with the edges of the mounting panel, the mounting card being retainable in said frame with the longer edges of such a rectangular display card or sheet extending parallel with one pair of parallel sides of the panel-receiving space defined by said frame or parallel with the other pair of such parallel sides. The invention also relates to means for use in providing right-angle joints between elongate members used in displays.
