Abstract (en)
[origin: EP0289727A2] The hair dryer has a housing for accommodating a heater and an electric motor for driving an impeller. There is also a run-out device. At one end, the housing has an inlet grid for the air to be taken in and, at the other end, an outlet grid for the outlet of the heated air. The outlet grid consists of an outer ring and several inner rings which are connected to one another by connection webs. At least one of the inner rings is arranged at an inclination to the longitudinal axis A-A of the hair dryer. <IMAGE>
