Abstract (en)

The device consists of a header box (12) communicating with an appended receptacle (14) which contains an oil exchanger (16). The input and output pipes (58) of the oil exchanger pass through a sealed joint in a wall (44) of the appended receptacle and are used to fix and support the oil exchanger in the appended receptacle. <??>Application especially to the cooling of the lubricating oil in the engine and/or the gear box of motor vehicles. <IMAGE>
