Abstract (en)

[origin: US4845395A] A commutator for a rotary electric machine, and a method of manufacturing said commutator. The commutator comprises a ceramic support and metal segments, the support constituted by a plurality of parts (1, 2) which are mutually separated by respective axial gaps (8) and bonded to the ceramic by a copper oxide eutectic surface. The invention is applicable to electric machines including commutators.
