Abstract (en)

[origin: EP0290356A1] Foldable goblet formed from two thin walls, of which the lower part comprises, once unfolded, a concave base (11) making it possible to keep the lateral walls (12) apart, of which the upper part comprises two tongues (22) which can be folded back and which are pressed on the lateral walls (12), and of which the ends (21) form a support polygon for the goblet. This goblet may be obtained from a tamper-proof closed bag, comprising a preliminary cutout enabling the bag to be opened whilst forming the tongue (22), capable of containing the ingredients and utensils whose implementation requires the use of the goblet. <IMAGE>
