Abstract (en)

[origin: WO8803805A1] Organic compounds and mixtures thereof and chelates of organic compounds with metal salts which show pharmacological activity in the treatment of cancers and non-malignant tumors, and against bacteria, viruses and fungi. More particularly, mixtures and chelates of metal salts with organic compositions wherein the metal portion is a multivalent metal halide. The compositions of this invention are less toxic than an equivalent amount of at least one separate component thereof. This invention also relates to the use of zinc chloride as a potentiator of organic compounds useful for the treatment of human tumors, and further relates to the use of specific organic compounds for topical treatment of human tumors. Methods of treatment of cancers and non-malignant tumors with the compositions described above are also disclosed, as are methods of treatment of bacterial, viral and fungal infections, and methods of selective debriding and skin ulcers.
