Abstract (en)

[origin: EP0290721A2] The invention relates to a process for mechanically applying sealing plugs of elastic material onto an electrical conductor for waterproofed connector designs or the like, the sealing plug being applied onto the end region of an electrical conductor with a compressed air blast. The invention furthermore relates to a device for carrying out the process, which device is characterised by a supporting device for at least one chamber body, into which a sealing plug fits in a positively locking manner and which has a means of connection for a compressed air line.
