Abstract (en)
The staging comprises spaced support assemblies 1, 2. Each support assembly comprises a rearwardly inclined truss member 3, 4 supported by a respective pair of legs 5, 6 arranged in an inverted-V configuration. Each truss carries a series of support brackets 14 to which decking members 15 are connected for pivotal movement in vertical and horizontal planes enabling the support assemblies to adopt different attitudes. The feet of the legs 5, 6 and the lower ends of the trusses swivellably stand on ground plates 13. Coarse levelling is achieved by adjusting the length of the legs 5, 6 or by spacer cups placed under the rear feet. Extension sections 3a, 4a are provided for connection to the upper ends of the trusses to support further decking members.
