Abstract (en)

[origin: EP0291376A1] The invention relates to an operating mechanism for a closable hood (1). When in an unstretched, balanced position, a spring 13, attached at one end to the end of a pivoting rocker bar 10 and at the other to a fixed point 14, keeps the rocker bar (10) substantially aligned with itself, while the tip of the retractable rod 8 of a cylinder 6 is supported by the end 9 of said rocker bar (10) close to the point of attachment of the spring (13). Application to fume extractors. <IMAGE>
