Abstract (en)

Double-sided coated fabric comprising conduits (3,4) in places, characterised in that it consists - of a first close coating support clad on its outer face with a first coating intended to form one of the faces (1) of the said fabric; - of a second coating support clad on its outer face with a second coating intended to form the other face (2) of the said fabric, the said second support (8) exhibiting alternations: - of open-weave parts through which the outer coating passes in order to adhere to the reverse side of the first support and thus to join the two supports together, - of close-weave parts, through which the said second coating does not pass, and which thus form the said conduits (3,4). <IMAGE>
