Abstract (en)
[origin: WO8803903A1] Parallelepipedic packaging made of semi-rigid material or similar, comprised of an element forming an outer shell and two composite elements forming a damping receptacle characterized by a single damping on the side faces and a double damping on the top and bottom faces. The packaging has a variable damping function adapted to the various fragility degrees of different contents, with reinforcement at the positioning points of the bottoms and lids. Said packaging is perfectly adapted to and in conformity with the packaging requirements of dangerous materials and/or materials of which maritime, air or road transportation is controlled by regulations, independently of the nature and mode of preconditioning of said materials, and said packaging comes also within the packaging requirements of all fragile materials or items.
