Abstract (en)
[origin: EP0291695A2] The barrel has at its top end at least one opening which is bounded by a nozzle part (24), provided with a thread. Said nozzle part is arranged in a trough-shaped depression in the top end in such a way that it projects at least partially into the interior of the barrel. In this case, the nozzle part (24) is provided on its portion which projects into the interior of the barrel (10) with at least one hole (60) which is advantageously arranged in such a way that it terminates on its side facing the top end (14) with the inner boundary of the bottom region bounding the trough-shaped depression (20). <IMAGE>
