Abstract (en)
[origin: EP0291830A1] In order, in a waste disposal vehicle having a vacuum container, which can be evacuated by means of a vacuum pump, for receiving liquid, slimy and/or pourable waste, the vacuum container being connected to a suction hose intended for receiving this waste, to keep the suction-line inlet into the vacuum container free from additional forces and to be able to take off the length of suction line required for a particular case, there is arranged on the top of the vacuum container (3) a fixed hose guide (7) having guide profiles (7.1, 7.2) arranged on both sides of the median plane of the vacuum container (3) and extending substantially axially parallel, and also a push-piece (9), displaceable along the guide profiles (7.1, 7.2), for turning the hose around, the suction hose, firmly connected at one end via a connection piece (6.1) to the vacuum container (3), being guided in each of the fixed guide profiles (7.1, 7.2) and being turned around in the push-piece (9) with an arc enclosing approximately 180 DEG . <IMAGE>
