Abstract (en)

The present invention concerns an anti-ballistic material consisting of loose fibres, one or two layers of woven or non-woven fabric impregnated with a cellulose acetate butyrate or cellulose acetate propionate resin or ethyl vinyl acetate, as such or plasticated or in a mixture with other resins the content of which is less than 50%. Said material lends itself to various uses and in particular to further processing, in that, being produced with a thermoplastic resin, it can be made plastic again by heating.
