Abstract (en)

Device for packaging articles for human consumption, particularly of the type having a solid or highly viscous texture, presented in portions or individual servings, comprising a plurality of receptacles which are combined in order to form a "grouping". Each part or portion is individually enclosed, over at least a part of its lateral surface, by a container (11) possibly equipped with a lid, and the said containers are combined with a support plate (10), providing ready-made reception zones (13) for each of the said servings or portions and their container, and means with a shape matching that of each container in order to position and hold the latter until a serving or portion is used. <IMAGE>
