Abstract (en)

[origin: EP0292728A2] The invention relates to an elastic base plate for a turntable for bottles in a labelling machine. The base plate comprises a rubber-elastic element 1 and a plurality of block-shaped frictional bodies 2 embedded in a distributed manner therein. The frictional bodies 2 have open supporting faces 12 which lie in the plane of the open surface 13 of the rubber-elastic material. The use of such a base plate permits not only a long service life but also good frictional engagement between the microstructurally fissured base of a bottle and the frictional bodies. <IMAGE>
