Abstract (en)  
[origin: EP0292847A1] Device for erecting a wall preferably from plate-like wall elements, particularly glass blocks which have bearing surface edge regions (41, 51) which are delimited at least on the bearing sides and are adjacent to the wall sides, and between which lies a set-back surface (42, 52), comprising at least one flat strip (22), preferably of tension-proof material, which can be inserted between the set-back surfaces of wall elements arranged above one another and/or next to one another, characterised by laying pieces (30) which can be connected to the flat strips (22) or are formed in one piece therewith and which have a bearing portion (10) suitable for arrangement between bearing surface edge regions (41, 51) lying above one another or next to one another. <IMAGE>
