Abstract (en)

[origin: EP0293587A2] In order to provide a door leaf (1) with a light opening or a panel, where the panel or the glass/transparent plastic for the light opening can be subsequently installed in a simple manner and can also be readily replaced, the opening (2) is framed on the outside and inside by strips (3) which partially cover the edges of the opening (2) and are supported thereon, and are provided on their inside (11), approximately at the centre of their cross-sectional profile, with undercut grooves (6), the base width (7) of which is greater than the width of the opening slot (8). Fitted into these undercut grooves are holding brackets (13) which engage with resilient retaining heads (15) in the mutually opposite grooves (6) of the framing strips (3) and thus move relative to one another. <IMAGE>
