Abstract (en)
[origin: EP0294212A2] An access floor structure has support means for supporting the panels above a solid floor. Each panel has a laminar panel element (1) fitted in said pan member (2) and resting on protrusions from the floor thereof, and a cover panel (9) fixed to said laminar panel element (1), the floor protrusions being so arranged as to increase the strength of the panel on two mutually perpendicular axes thereof.
