Abstract (en)

[origin: EP0294280A2] The invention relates to the sizing of an elongate extruded workpiece (1) having a longitudinal axis and possessing a lateral surface (7) substantially parallel to this axis. The device is characterised in that it comprises a wheel (2) caused to revolve upon its axis (5), this wheel having at least one flat annular surface (6) perpendicular to the axis (5) of the wheel and centred upon this axis (5), the annular surface (6) being designed to cooperate with the lateral surface (7) of the extruded workpiece in the course of a movement of the wheel relative to the workpiece (1) following an axis parallel to the longitudinal axis of this workpiece. The device is furthermore characterised in that it possesses coating means (4) designed to deposit on at least the outer perimeter of the annular surface (6) enough size to allow sizing of the lateral surface (7). <IMAGE>
