Abstract (en)

[origin: JPS6452346A] PURPOSE: To improve the contact resistance and contact heating by composing the material for electrical contact of iron, one or several kinds of specified additive, and silver as residual. CONSTITUTION: Silver-iron material, which is composed of iron at 3-30wt.%, additive, namely, one or several kinds of manganese, lead, antimony. bismuth oxide, molybdenum oxide, tungsten oxide, chrome nitride at 0.05-5wt. % as a total and silver as residual, is used. An oxide layer is influenced by the additive so as to have excellent stability in relation to melting and a low contact resistance. Contact heating is thereby restricted as small as possible, and long lifetime and wide use range can be obtained in relation to intensity of the contact current.

Abstract (de)

Für elektrische Kontakte wird ein Silber- Eisen- Werkstoff verwendet, der eine geringe Verschweißneigung, einen geringen Kontaktwiderstand und einen breiten Anwendungsbereich besitzt. Er enthält neben Silber 3 - 30 Gew.-% Eisen und einen oder mehrere der Zusätze Mangan, Kupfer, Zink, Antimon, Wismutoxid, Molybdänoxid, Wolframoxid und Chromnitrid in Mengen von insgesamt 0,05 bis 5 Gew.-%.
