Abstract (en)

[origin: EP0294719A1] Container coupling for the transport and/or storage of a predetermined liquid, with a filling container possessing a filling-container closure capable of being opened, and a collecting container separated therefrom and possessing a collecting-container closure capable of being opened, both closures being able to be coupled to one another and as a result being opened, and the filling-container closure being designed as a switchable filling/discharge valve which is switched by the coupling process or uncoupling process, so that, in the coupled state, the filling of the collecting container by the filling container becomes impossible. <IMAGE>
