Abstract (en)  
[origin: EP0294825A2] In the decorative board, a coating layer (5) of a non-transparent paint containig resin component and 10 to 20 wt% of pigment is formed on the surface of a cork board. The viscosity of the non-transparent paint is not higher than 100 cps, and the coating amount of the non-transparent paint directly after its application is not higher than 15 g/m<2>. The marble-like gradation pattern is formed in the coating layer as a result of the difference in absorptivity of the cork board.
