Abstract (en)  
[origin: EP0294832A2] The pulp screening apparatus comprises a housing (1) having an inlet (6) for allowing fibrous stock to be introduced into the interior, a first outlet (8) for allowing the accept screened stock to be removed, a second outlet (9) for the reject, a screen (3) having a contour surface within the housing (1), a rotor (4) moving in the vicinity of the screen (3) at a predetermined speed and forming together with the screen (3) an annular screening chamber (12). The rotor (4) has at least the surface facing the screen (3) partially contoured and is provided with a plurality of perforations along at least a portion of the length of the screening chamber (12) to allow fibrous stock to be introduced into the screening chamber (12) and to prevent the undesired debris of the stock from entering the chamber (12). Both sides of the rotor (4) may have a contoured surface with grooves.
