Abstract (en)

The revolving head comprises compartments (1), each provided with at least one articulated quadrilateral mechanism (4) designed to move at least one presser shoe (7) into a position whereby a container (2) or loose item occupying the compartment can be clamped firmly during rotation; the quadrilateral mechanism is operated by a lever (5) capable of assuming two stable positions: a first, in which the entrance to the compartment (1) remains unobstructed, and a second, in which the entrance is blocked by the lever and the presser shoe (7) is in the clamping position.
