Abstract (en)  
[origin: EP0295889A1] An edging strip for a display panel (10) comprises a channel-shaped rail (11) having two side elements (13, 14) joined by a base (15). The side elements are adapted to receive and grip an edge of the display panel and at least one of the side elements has an inner portion (16) adjacent the base and an outer portion (17) joined to the inner portion by a resilient web. The outer portion of each side element incorporates a resilient hinge portion intermediate its length and a substantially rigid free end extending beyond the inner portion. The outer portion can be snapped from a closed position in which the free end bears against the display panel to an open position in which the free end extends away from an is spaced from the display panel.
