Abstract (en)
An integrated cutting blade assembly for cutting sheet members comprises a plurality of main blade sections (3A) and a plurality of common blade sections (3B), the main blade sections (3A) being integrally welded (W) to adjacent ones of the common blade sections (3B) to form a plurality of cutting blades. The integrated cutting blade assembly eliminates the loss of materials of the sheet members when compared to the use of a plurality of independent cutting blades having gaps between them.
