Abstract (en)

The present invention relates to an automatic safe-deposit container for trolleys intended for transporting luggage or goods, with a possibility of putting the assembly loaded in the container in anti-theft deposit. This container, the essential part of which consists of a tubular frame, possesses a rack with fins (1) which slides in bent U-sections (3) and (4) so as to form a right-angled track between the rear uprights (5) (6) and the low longitudinal members (13) (16) said rack retracting when it is pushed by the trolley. The front uprights (7) (8) are coupled to the rear uprights by means of high longitudinal members (14) (15) and low longitudinal members (13) (16). The deposit volume is obtained by adding crossmembers (9) (10) (12) and (17). A display volume is fastened to this volume by means of the extension of the rear uprights (5) (6) associated with the crossmembers (11) (28) and with four other tubes (18) (19) (20) (21) placed obliquely between the said uprights and the longitudinal members (14) (15).
