Abstract (en)

[origin: EP0296340A1] 1. Arrangement for covering an opening (1) for the passage of light on a sloping roof with two level, translucent covering elements (10), supported on bars (8), separated from one another by seals (12), and having heat insulation (5) between frame (2) and covering elements (10) together with metal sheets (15) on the ridge side and on the eaves side, characterized in that support brackets (6) with the same spacing as the bars are fitted on the frame (2) to hold the bars (8), and the bars (8) are designed to jut into these support brackets in the area of the opening (1) for the passage of light.
