Abstract (en)
[origin: EP0296515A2] The gap (3) between the inner shell (1) and the outer shell (2) of two-shell masonry is bridged with the aid of a mounting case (5) having an approximately L-shaped cross-section. The mounting case (5) is fastened to the inner shell (1) of the wall using screws (7) and fixed to the outer shell (2) of the wall using anchors (8) which are held invisibly in an anchor groove (9). Seals (10, 11, 30) prevent the penetration of moisture and draughts of air. Windows or doors are fitted in the mounting frame (5) and fixed dry between a rabbet (26) and a clamping strip (15). Subsequent plasterwork is entirely dispensed with. <IMAGE>
