Abstract (en)
[origin: GB2210278A] Curved track sections of a toy car slot racing system have a flange 30 narrowing the upper part of the slot 14, to thus retain the enlarged base 31 of a guide member depending from the car. The guide member is releasably and pivotably connected to the car. As shown in figure 5, the guide member is elongated in the direction of the slot. Stops 40, 41, which may be spring arms, coact with part 33 of the guide member to limit pivoting of the car relative to the guide member. Alternatively, the guide member may take the form of a stepped cylinder depending from the car (figures 7-9, not shown). <IMAGE>
