Abstract (en)

[origin: EP0297372A2] The transport container (1) consists of corrosion-resistant steel and has an upper screw closure (5), in which a top plate (10) is arranged. Two immersion pipes (6, 8), directed towards the bottom of the container bottom, are passed through the top plate (10). Their upper connection nozzles (7, 9) are bent obliquely upwards and outwards. Mounted in each case at the lower ends of the immersion pipes (6, 8) are plastic sleeves (16, 17) which prevent metallic contact of the immersion pipes (6, 8) with each other and with the container bottom (4). <IMAGE>
