Abstract (en)

[origin: EP0297526A2] In order to facilitate the handling of a wet-dry vacuum cleaner, a carriage-type running gear 1 is used which is provided at one end with a structure 7, on which a lid 11 is hinged. Apart from the structure, the carriage has a standing surface 6 for receiving a container 6 which, when the lid is swivelled, is both mechanically fixed and also closed in a sealed manner. The motor/fan assembly 9 is arranged in the structure and connected to the lid in such a way that, when the lid is swivelled up, the suction line 10, 12 is interrupted. In order to replace a container of the vacuum cleaner, which has excellent handling characteristics due to the low position of the centre of gravity, the lid only needs to be swivelled up in order to be able to grip the container. <IMAGE>
