Abstract (en)

[origin: EP0298070A2] Inserted in profile strips (1) fastened to the wall or ceiling are holders (3) for the covering (13), the holders in each case possessing two projections (5) resting in a groove (2) of the profile strips (1) and lugs (12) which hold the covering (13). The lugs (12) are arranged in outer regions (11) which are spaced apart from one another and are mutually opposite in relation to the groove (2), and the projections (5) are arranged in the central region (4) of the holders (3), as a result of which, in addition to a simple and secure fastening of the covering (13), it is also possible, in the region of impacts of the covering, to hold the two parts, adjoining one another at that point, securely together. <IMAGE>
