Abstract (en)

[origin: EP0298238A2] In order to be able to tension an intaglio printing plate, with extremely high tension forces at the trailing edge, uniformly over the entire width of the plate on the plate cylinder of a printing machine, a tension bar (4) is provided which is secured to measuring rings (14, 15) which can be loosely pushed on to the two cylinder journals (16, 17) of the plate cylinder (1) and which can be pivoted by an actuating mechanism (18). <IMAGE>
