Abstract (en)
[origin: EP0298381A1] The container (1) which has a rectangular contour and vertical side walls (3) can be picked up or set down by a transport vehicle by means of an exchange apparatus, which is known per se, with a tipping bridge, along which a container can be moved. Each container (1) has slide elements (6, 7) in the region of its bottom and, in the region of that part of its upper opening edge which is formed by the side walls, longitudinal guides for a supporting guiding of the slide elements of a container placed on top, and locking elements (9, 10) for fastening to an adjacent container in each case in the stack consisting of several containers. In this case, upper longitudinal edges (8) are constructed as longitudinal guides and the slide elements (6, 7) are constructed as rollers mounted on the container. <IMAGE>
