Abstract (en)
[origin: EP0298382A1] The container (1) has outwardly inclined walls (3, 4) for the purpose of stacking one inside the other and slide elements (14, 15) for supporting sliding on upper longitudinal edges (7), serving as longitudinal guides, of the next lower container in the stack. <??>Slide elements (14, 15), provided for the purpose of additionally being able to stack the containers, especially filled containers, one above the other, are arranged adjustably on the container in such a way that they are situated in an adjusting end position in the lower region of the container above the respectively assigned longitudinal edge of the next lower container in the stack. <??>Each slide element (14, 15) is arranged on an adjusting member (12, 13) which is held on the container so as to be movable in an adjusting manner by means of a holding member (8, 9) situated on the container. <IMAGE>
