Abstract (en)  
A franking machine system is disclosed in which a master controller (19) is provided to communicate with a postal authority resetting centre computer (14) and with a plurality of franking machines (17,21). The controller (19) includes registers (25,26) for storing the value of credit available for distribution to the franking machines (17,21) and registers (25,26) for storing data relating to usage of the individual franking machines (17,21). Credit is obtained from the resetting centre computer (14) by the controller (19) and is distributed to the franking machines (17,21) as required by each machine.
