Abstract (en)
[origin: EP0298831A1] Method and device for protecting a selective-access system against a fraudulent use of a magnetic card with a confidential code. <??>Each card (CM) is assigned a class corresponding to a zone of a memory (PROM). The number of classes is equal to the number of zones and is substantially smaller than the number of cards (CM) liable to be presented. <??>At each failure to enter a confidential code, a bit is modified in the appropriate memory zone. <IMAGE>
